

CS 260 Project
First Semester AY 2015-2016

First Deliverable: High Level Requirements Analysis and Internal Report
Due: 24 August 2015, 5:00 p.m.

You are part of a consortium seeking to put in a bid for the Philippine 2016 voting machines. The bid documents from which details could be mined are referenced below:

<http://www.comelec.gov.ph/?r=AboutCOMELEC/BidsandAwards/ProcurementProjects/BAC012014AESOMRSecondBidding>

(particularly starting with Bid Document #4). I have attached the Technical Specifications, but I recommend you read through the various Bid Documents to get an appreciation of the big picture.

Part I.

You are asked to write a high level technical requirements documents to present a system view of what your consortium intends to deliver. You are encouraged to use standard software engineering tools (such as Use Case Diagrams and Narratives) to provide these requirements. You may consolidate similar functions into modules/packages. Note that, at this stage, you are only asked to provide high level requirements. Low level implementation details need not be provided at this point. At this point, as you are still putting in a bid, you are optimistic you can deliver most, if not all of the requirements. :)

Part II.

You are also asked, as a report meant for internal consumption only, an early risk assessment evaluation and draft operational plan for the project. This is intended for the members of your consortium, (1) to appreciate the potential problems with respect to project and (2) to evaluate potential approaches on how your consortium might meet the deliverables. Again, this exercise is still at the high level stage, so the risk report and operational plan do not need low level details.

Submit this document in PDF format, with your name and student number also indicated in the submission, by sending it via e-mail to spfestin.up@gmail.com by 24 August 2015, 5:00 p.m.
