

CS 260 WedD
Homework on Defect Removal Effectiveness Computation.
Submit by 30 Sep 2015.

Given the following table:

Phase of Origin									
	Req	Des	Code	UT	IT	ST	Field	Total	Cumu
Req	5							5	5
Des	2	14						16	21
Code	3	9	49					61	82
UT	0	2	22	8				32	114
IT	0	3	5	0	5			13	127
ST	1	3	16	0	0	1		21	148
Field	4	7	6	0	0	0	1	18	166
Total	15	38	98	8	5	1	1	166	
Cumu	15	53	151	159	164	165	166		

Compute the following.

1. Effectiveness of the code inspections. (How good are the code inspections?)
2. Effectiveness of unit testing. (How good are the unit tests?)
3. Requirements PCE (How well are requirements problems found and fixed during the requirements inspections?)
4. Given that the codesize is 30 KLOC, compute the release defect density. (How good is the product?)
5. Coding defect injection rate. (How frequently are mistakes made during coding?)
