CS 260 Midterm Exam

Submit as PDF file via e-mail to spfestin.up+CS260@gmail.com by Wednesday 7 October 2015.

Your name and student number should be in the PDF file (not just in the e-mail).

Use proper citations for your references.

Question 1.

Briefly discuss (in 1-2 paragraphs), how the following concepts differ from one another. Provide examples on how you might measure them.

1.a software process vs. product metrics

1.b coupling, cohesion, and complexity metrics

Question 2.

Pick any two of the following software quality models and provide (a) a definition of the models, and (b) comparison of the two models, as applied to software (highlighting the differences between your chosen models).

2.a McCall's Quality Model (1977)

2.b Boehm's Quality Model (1978)

2.c FURPS (by R. Grady) and its successor (FURPS+)

2.d Dromey's Quality Model

2.e ISO 9126: Software Product Evaluation

2.f Capability Maturity Model

2.g Six Sigma

Question 3.

Discuss the pros and cons of using KLOC and function points as the base unit for software metrics.
